The contractor shall apply paint in strict accordance with the applicable manufacturer’s printed data sheet and container label outlining recommended minimum and maximum surface and air temperatures required for application. moisture condensation should be anticipated, and if such conditions are prevalent, painting shall be delayed until certain that the surfaces are dry. Painting should be completed well in advance of the probable time prior to the formation of moisture on the surface.

The coating shall be applied at the specified thickness. If the specified thickness is not obtained, an additional coat(s) of paint shall be applied.
